2019 USA Military Power

Total Aircraft Strength value includes both fixed- and rotary-wing systems from all branches of service (UAVs are not included in this total). Attack values cover both multirole and purpose-built light-attack types (and so some fighters also fall into the Attack total). Transports value includes only ixed-wing tactical/strategic aircraft. UAVs are currently being excluded from the total. For an in-depth look into the numbers available to any one air force of the world, consider <u>www.WDMMA.org</u> (external link) - the "World Directory of Modern Military Aircraft". Also consider <u>Aircraft</u> throughout the military history of <u>United States</u> (external link).

Total Aircraft Strength: 13,398 (ranked 1 of 137) Fighters: 2,362 (17.6%) (ranked 1 of 137) Attack: 2,831 (21.1%) (ranked 1 of 137) ransports: 1,153 (8.6%) (ranked 1 of 137) rainers: 2,853 (21.3%) (ranked 1 of 137) otal Helicopter Strength: 5,760 (43.0%) (ranked 1 of 137) Attack Helicopters: 971 (7.2%) (ranked 1 of 137) https://www.globalfirepower.com

Digital Battlefield - Who has the Best Offensive Capabilities?

Some types of attacks that have been or could be used in cyberwarfare.

Denial of service

Iran allegedly flooded U.S. bank websites with messages to disable financial networks

U.S. allegedly implanted malware to secretly control foreign networks at a later date

Mass emails to trick

Malware could show false employees into revealing targets on radar or passwords; likely used in disable air-defense OPM attack systems

The U.S. and Israel allegedly used Stuxnet worm to destroy Iranian nuclear centrifuges

Major players in computer warfare and some alleged activities.

39

Military's Cyber Command conducts operations; implanted malware in foreign Sources: staff reports; computer security researchers and U.S. officials

Skilled at developing hacking tools; infiltrated

Pentagon, State Department, White

Army divisions specialized in 'phishing'; theft of details on U.S. Joint Strike Fighter project

Saudi Aramco and at Las Vegas Sands; denial of service attacks on U.S.

Leaked emails and destroyed files at Sony Corp.'s Hollywood film

THE WALL STREET JOURNAL.

NATIONAL SECURITY

Shadow Brokers Group Leaks Stolen National Security Agency Hacking **Tools**

June 29, 2017 · 4:29 PM ET Heard on All Things Considered

Last August, hacking tools were stolen from the National Security Agency. Now, those tools are being used in a number of cyber attacks around the world, and there's mounting pressure on the NSA to do something. NPR's Robert Siegel talks with Nicole Perlroth, who has been covering this for The New York Times.

53

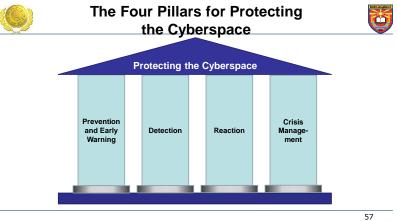

56

54

Reasons for Successful Cyber Attack

Technical

People

of all successful cyber attacks is caused by human error

58

59

57

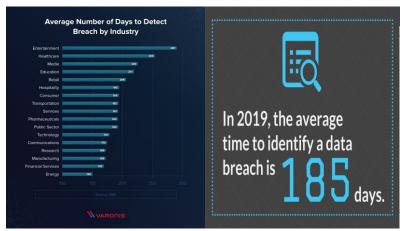

Measures (Technical)

- · Increase the number of software vulnerabilities discovered
- Increase the number of vulnerabilities disclosed by researchers to software developers
- Increase the speed of patch issuance once developers learn of vulnerabilities in their products
- Increase the number of customers that apply patches to security flaws once issued by software
- Use Defence in Depth, including different hardware and software solutions from different manufacturers.

63

63

Measures (Other)

Where we should be?

- National Cyber Security Strategy (EFFECTIVE!!!)
 - Holistic approach considering entire Eco System
- · Education/Training
- · Increased funding for more secure cyberspace
- Institution / team response to cyber threats (EFFECTIVE!!!)
 Teamwork (CERT/CIRT/CSIRT, SOC)
- Information sharing and cooperation (ona national and international level)

 New profile of experts - trained for offensive and defensive cyber warfare

- · Active (Dynamic) instead of Static defense
- · Proactive rather than Reactive defense

65

65

66

Where we should be?

"We don't want to be forensics experts.

We want to catch the enemy before he operationalise the exploit"

Thank you for your attention!
